DETAILED ACTION

Response to Arguments

Applicant's arguments, see paper 12/16/2009, filed 12/16/2009, with respect to the "Final Rejection" (paper 7/23/09) have been fully considered and are persuasive because "Gianturco-5,282,824" does not explicitly disclose element 20 as a circumferential connecting strut, which is able sustain a compression force. The finality of the office action (7/23/2009) has been withdrawn.

However, upon further consideration, a new ground(s) of rejection is made in view of Moriuchi et al-5,879,381.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before

Art Unit: 3773

November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 38-40, 44-49, 51-52 are rejected under 35 U.S.C. 102(e) as being anticipated by Moriuchi et al.-5,879,381 (Moriuchi).

As to claims 38-40, 44-49, 51-52, Moriuchi (F 12, for example) shows closed circumferential support structures having apex portions longitudinally overlapped each other, circumferential connecting struts 59a, 59b extending in two opposite directions and between two apex portions substantially as recited in the claims. Notice that circumferential connecting struts 59a, 59d are wider than at least some of the longitudinal struts defining apex portions (please see F 7, 8, 9, and 12).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 50 are rejected under 35 U.S.C. 103(a) as being unpatentable over Moriuchi et al.-5,879,381 (Moriuchi).

As to claim 50, Moriuchi does not explicitly disclose that some of the longitudinal struts are longer than the other. However, it would have been an obvious matter of design choice to modify a dimension, such as a length, of an element as one desires, since such a modification would have involved a mere change in the size of a component. A change in size is generally recognized as being within the level of ordinary skill in the art. In re Rose, 105 USPQ 237 (CCPA 1955).
